Reasons for Allowance

1. Claims 1-22 are allowed.
2. The following is an examiner's statement of reasons for allowance:

While Cardner discloses improving model product property estimates from process simulation models run in parallel with the process including comparison of model stream quality estimates with measured values to produce a corrective signal for adjustment of the model.

Hamielec (reference cited on 3/11/2004) teaches a process simulator and modeling of polymer manufacturing systems operate under steady-state conditions for calculating full distribution of polymer properties from the instantaneous property measured.

And Chen (reference cited on 3/11/2004) teaches a methodology for characterizing polymer components in process simulation software such as thermo-physical property calculations and polymerization kinetics.

None of these references taken either alone or in combination discloses a computer apparatus for determining state of physical properties of a chemical process having all the claimed features of applicant's instant invention, specifically including: "an inferential model means coupled to receive the values of the physical properties at steady state from the steady state modeling means, the inferential model means for determining state of the physical properties over a period of time based on values of the physical properties at steady state". Also, there is no motivation to combine the Cardner reference with the Hamielec or Chen reference to meet these limitations. It is for these reasons that applicant's invention defines over the prior art of record.
